

## ICD-10 Coding

### Entering Codes

- Only one *Admission* diagnosis, one *Primary*, and no more than 12 *Secondary* diagnoses should be entered on each resident's chart. Use the *Other* or *Historical* options for any additional diagnoses beyond *Admission*, *Primary*, or *Secondary*.
- If a facility does not differentiate between Admission and Primary diagnoses, these can be the exact same.
- ECS is not making any changes related to the ordering of diagnosis codes.
- The Diagnosis documentation screen will display the diagnosis code, ICD-10 name, PDPM Category, SLP Comorbidity, and NTA Score.

The screenshot shows a software window titled "Diagnosis" with a search bar containing "c32". Below the search bar, a table lists "Found Medical Conditions" with columns for ICD10, ICD10 Name, PDPM Category, SLP Comorbidity, and NTA Score.

ICD10	ICD10 Name	PDPM Category	SLP Comorbidity	NTA Score
C32	Malignant neoplasm of larynx			
C32.0	Malignant neoplasm of glottis	Cancer	X	
C32.1	Malignant neoplasm of supraglottis	Cancer	X	
C32.2	Malignant neoplasm of subglottis	Cancer	X	
C32.3	Malignant neoplasm of laryngeal cartilage	Cancer	X	
C32.8	Malignant neoplasm of overlapping sites of larynx	Cancer	X	
C32.9	Malignant neoplasm of larynx, unspecified	Cancer	X	

### Editing Options

#### Example 1: A part of a diagnosis entry/entries is charted incorrectly

(e.g., incorrect effective date, incorrect heading, incorrect resident, incorrect code)

1. Click the incorrect entry to turn it red. Multiple entries may be selected if all are incorrect.
2. Click the **Edit** button. A menu of options will appear.
3. Select **Archive**. A box will appear and ask: *Are you sure you want to archive all selected entries?* Click **Yes**.
4. The entry or entries will turn gray to show the edit is complete.
5. Click **Go** to refresh the view screen and see the changes.

# AMERICAN DATA

Example 2: A diagnosis is resolved, or multiple diagnoses are resolved  
(e.g., urinary tract infection or skin ulcer is healed)

1. Click the incorrect entry to turn it red. Multiple entries may be selected if all are incorrect.
  - a. You may only select multiple entries if they all have the exact same discontinue date.
2. Click the **Edit** button. A menu of options will appear.
3. Select **Discontinue and Append** to resolve a single diagnosis or **Discontinue All and Append All** to resolve multiple diagnoses at one time. A box will appear and ask: *Are you sure you want to DC selected entry [ies]?* Click **Yes**.
4. A write screen will appear with '(discontinued)' in the text box. Click **DISCONTINUE DATE** and select the date the diagnosis is considered no longer current. Then, specify whether the diagnosis is **Resolved** or **Inactive**.
5. Click **Next** to save the Discontinue Date and return to the view screen.
6. The entry or entries will turn gray to show the edit is complete.
7. Click **Go** to refresh the view screen and see the changes.

Utilizing the Discontinue Date will assure that the diagnosis does not inappropriately appear on the financial forms during a time frame that was not actually relevant.

## Return to Provider Warning

### Documenting Screen

With the transition to PDPM, this new warning message alerts users if an Admission or Primary diagnosis code is charter that is within the 'Return to Provider PDPM' category. Medicare and Medicare type payers will not accept 'Return to Provider' diagnosis codes. This warning message is intended to warn users that they have chosen a 'Return to Provider' code. If this option is chosen to be utilized within ECS, it is recommended that the warning message be set up on the Admission Diagnosis and Primary Diagnosis words within the ICD-10 Diagnosis topic. If a therapy department charts in ECS, it is also recommended that these setups be applied to the Medical Diagnoses words in the PT Initial Eval, OT Initial Eval, and SLP Initial Eval topics as well.

Diagnosis

Search:  
uti

Found Medical Conditions:

ICD10	ICD10 Name	PDPM Category	SLP Comorbidity	NTA
O07.38	Urinary tract infection fol failed attempt term of pregnancy	Acute Infection		
O08.83	Urinary tract infection fol an ectopic and molar pregnancy	Acute Infection		
<b>O86.2</b>	<b>Urinary tract infection following delivery</b>			
O86.20	Urinary tract infection following delivery, unspecified	Acute Infection		
O86.29	Other urinary tract infection following delivery	Acute Infection		
P39.3	Neonatal urinary tract infection	Acute Infection		
R78.81	Bacteremia	Return to Provider		

Warning

The selected ICD-10 code is a "Return to Provider" code. This code may be invalid for Medicare payers. Would you like to continue?

Yes No

## Setup Steps

1. Go to the **Setup** icon.
2. Click into the Diagnosis tab.
3. Double click the Medi-Span ICD-10 Diagnosis topic.
4. Double click the ADMISSION DIAGNOSIS word.
5. Navigate to the **Formulary** tab.
6. Place a checkmark in the **Return to Provider** checkbox.
7. Click **OK** to save changes.
8. Repeat steps above for all words that should present this warning message.

\*American Data recommends this setup, at a minimum, on Admission and Primary Diagnosis words. Facilities may also choose to set this up on the Medical Diagnosis words in Therapy > PT/OT/SLP Initial Evaluation topics.

\*Note: once set up, this warning message will trigger regardless of the resident's payer source.

## Financial Forms

In the setups of the UB04 and HCFA 1500 (2014), American Data has added functionality that will check if a diagnosis code is a 'Return to Provider' code. If the diagnosis code is a 'Return to Provider' code, the form will provide an error message and will not allow the user to complete or submit the form. This checkmark can be turned on specific setup types and specific fields within the financial forms.

This setting may be checked at any time, but the functionality is based on dates of service on/after October 1, 2019. 'Return to Provider' errors will only appear on/after this date of service.

Audit Results

Adams, Suzanne C

Field 69 Admit DX R7881 is a Return to Provider diagnosis and cannot be submitted for this payer.

Font Print Close

## Setup Steps for UB04

1. Open a Medicare (A) or Medicare (B) UB04 form.
2. Click the **Setup** button.
3. Click the Field drop down and scroll to the appropriate field (e.g. field 67 Primary Diagnosis Code and 69 on the UB04).
4. Place a checkmark in the **Return to Provider** checkbox on the bottom left side of the screen.
5. Click **Apply** to save changes.

## Setup Steps for 1500

1. Open a 1500 form.
2. Click the **Setup** button.
3. Click the Field drop down and scroll to the appropriate field (e.g. field 21a Diagnosis of Nature of Illness or Injury).
4. Place a checkmark in the **Return to Provider** checkbox on the bottom left side of the screen.
5. Click **Apply/Close** to save changes.

## Show PDPM Tags in View Screens

This option allows users to view existing diagnosis codes and determine any diagnosis codes that are a 'Return to Provider' code. This setup can be added to an existing view task or used anytime a user loads a view screen with diagnosis codes. In the MDS, in Section I, when clicking the question buttons to display the resident's diagnosis codes, the PDPM tags will automatically display. In the UB04 and 1500 (*ECS10 only*), when viewing the diagnoses via Show Source, the PDPM tags will also automatically display.

This property cannot be defaulted system wide, however, can be saved with the appropriate view tasks. In addition, PDPM tags cannot be seen in the CAA screen. To view the PDPM tags within a defined review screen, the user can click on **Control > Look > Show PDPM Tags**.
