AMERICAN DATA

Why You Need EMR Flexibility

ECS
(Electronic Chart System)

American Data's ECS is an Electronic Chart System with customizable and flexible features. Your operation is unique. We believe systems should adjust to that uniqueness, not the other way around. The ECS components for every care setting provide an integrated resident record. Whether you offer one care setting or several, ECS has a proven record to meet your needs.
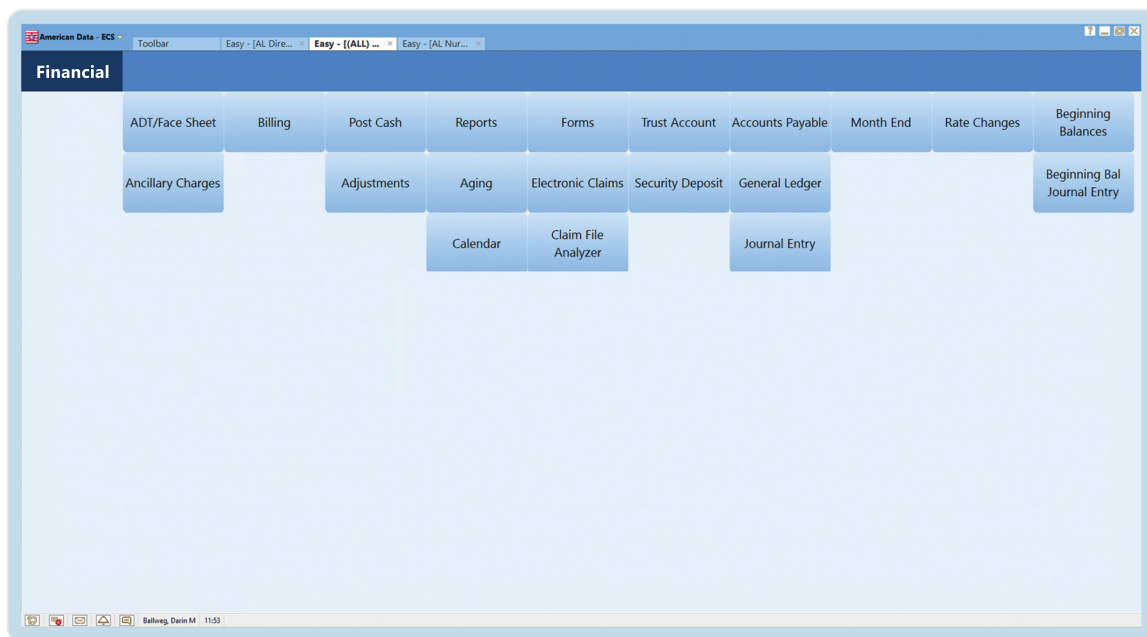

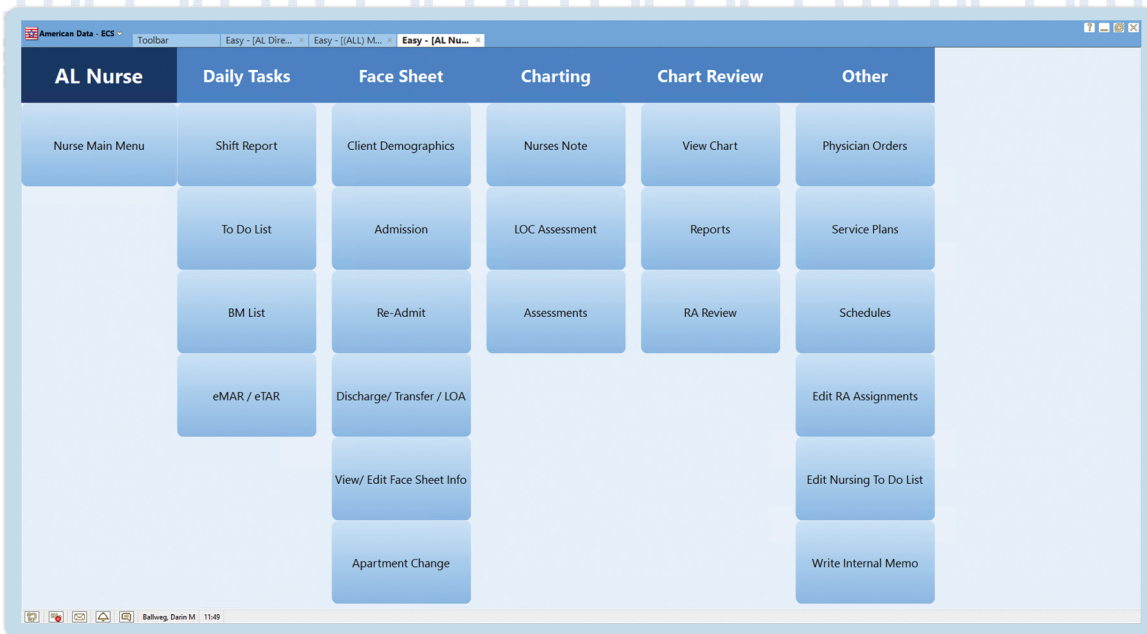

Superior EMR Software at Affordable Prices

Role-defined navigation screens support your workflow by providing quick access to the charting and reviewing tasks most used by team members. These navigation menu screens are controlled by the facility. This ensures that ECS adjusts to the workflow of your staff rather than forcing staff to adjust to the software's workflow. In addition, they decrease training time for new hires and implementation.
